

AI Customer Support Agent for Retail Mobile Store

Project Overview:

This project is an AI-powered customer support system built using Salesforce Agentforce and Service Cloud. It helps automatically handle customer queries related to mobile products such as issues, complaints, and basic support requests without human intervention.

The goal of this project is to improve customer service efficiency, reduce manual workload, and provide faster responses using automation and AI.

Features

- Automatically responds to customer queries
- Handles mobile product-related issues
- Uses AI agent for smart responses
- Reduces dependency on human support agents
- Improves response time and customer satisfaction
- Built using Salesforce automation tools

Tools & Technologies Used

- Salesforce Developer Org
- Agentforce (AI Agent)
- Service Cloud
- Flow Builder

- CRM Automation

Project Workflow

1. Customer raises a support request (issue/complaint)
2. AI Agent (Agentforce) receives the query
3. Salesforce Flow processes the request
4. System analyzes the issue type
5. Automated response is generated
6. Customer receives solution instantly

Outcome:

- Reduced manual customer support effort
- Faster response time for customer queries
- Improved service efficiency using automation
- Demonstrated real-world AI + CRM integration

Future Improvements

- Add chatbot interface for customers
- Integrate WhatsApp/email support
- Improve AI response accuracy
- Add analytics dashboard for insights

Conclusion:

- The AI Customer Support Agent for a Retail Mobile Store was successfully implemented using the Salesforce Developer Org environment. This project demonstrates how Salesforce capabilities can be used to build an intelligent and automated customer service system. The agent is able to handle customer queries such as product details, issue resolution, and basic support tasks efficiently, reducing dependency on manual support teams. By leveraging Salesforce features, the system improves response time, enhances customer experience, and ensures 24/7 availability. Overall, this project highlights the power of integrating AI-driven solutions within Salesforce to create scalable and efficient customer support systems for real-world business use cases.
